

AEP Pole Project

AEP Ohio is upgrading its equipment to support the Washington Township/Dublin area's growing energy needs.

Upgrades will include replacing existing poles with poles that are approximately five feet taller, and installing approximately six miles of new overhead electric line on the new poles. The new equipment will help meet existing electric needs and support future growth in your community.

AEP Ohio has set up a webpage to update residents on the project. You can find that information at: <https://www.aepohio.com/community/projects/Hayden>.
